

Migration to another magento

Easy migration is useful to push live feeds that were tested on a staging magento instance.

1. Destination magento instance should have the same feed extension version [installed](#). To check the extension version navigate to Admin > System > Configuration > Rocket Web Extension > General > Installed Extensions.

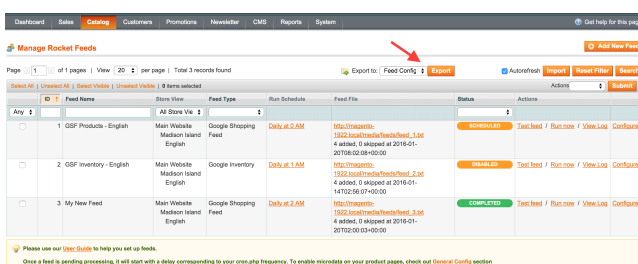

2. Export feed configs.

This needs to be carried out on staging (source) where your feeds have been configured.

Navigate to [feeds management](#) screen and select the feeds you want to migrate from the grid, then click the [Export](#) button at the top of the grid.

An xml file containing feed configuration is prompted for download. (see **Fig 9.3**)

Fig 9.3 Export feed configs

3. Import the XML.

On the target magento (live), click the [Import](#) button at the top of [feeds management](#) screen. A screen will come up asking you to [Select File to Import](#), where you will upload the file previously downloaded from staging. Next, click the [Import Data](#) button to complete the action. (see **Fig 9.4**)

Dashboard Sales **Catalog** Customers Promotions Newsletter CMS Reports System [Get help for this page](#)

Total size of uploadable files must not exceed 2M

Import Feeds [Import Data](#)

Import Settings

Entity Type *
Reserved for the future use, in case we decide to use other data export types.

Select File to Import * No file chosen
Please click the following link to download a sample import file. [Sample Data](#)

To validate the migration, [generate the feeds](#) you just imported and compare the output with the one on staging.
